

PRISMA-P (Preferred Reporting Items for Systematic review and Meta-Analysis Protocols) 2015 checklist: recommended items to address in a systematic review protocol*

Section and topic	Item No	Checklist item
ADMINISTRATIVE INFORMATION		
Title:		
Identification	1a	Identify the report as a protocol of a systematic review See page 1, line 2-3
Update	1b	If the protocol is for an update of a previous systematic review, identify as such NOT APPLICABLE
Registration	2	If registered, provide the name of the registry (such as PROSPERO) and registration number See page 7, line 119-123
Authors:		
Contact	3a	Provide name, institutional affiliation, e-mail address of all protocol authors; provide physical mailing address of corresponding author See page 1, line 8-24
Contributions	3b	Describe contributions of protocol authors and identify the guarantor of the review See page 19, line 414-418
Amendments	4	If the protocol represents an amendment of a previously completed or published protocol, identify as such and list changes; otherwise, state plan for documenting important protocol amendments See page 17, line 365-367
Support:		
Sources	5a	Indicate sources of financial or other support for the review See page 18, line 397-413
Sponsor	5b	Provide name for the review funder and/or sponsor See page 18, line 397-413
Role of sponsor or funder	5c	Describe roles of funder(s), sponsor(s), and/or institution(s), if any, in developing the protocol See page 18, line 397-413
INTRODUCTION		
Rationale	6	Describe the rationale for the review in the context of what is already known See page 6, line 94-107
Objectives	7	Provide an explicit statement of the question(s) the review will address with reference to participants, interventions, comparators, and outcomes (PICO)

See page 7, line 109-111

METHODS

Eligibility criteria	8	Specify the study characteristics (such as PICO, study design, setting, time frame) and report characteristics (such as years considered, language, publication status) to be used as criteria for eligibility for the review See page 8, line 125-161
Information sources	9	Describe all intended information sources (such as electronic databases, contact with study authors, trial registers or other grey literature sources) with planned dates of coverage See page 9, line 162-188
Search strategy	10	Present draft of search strategy to be used for at least one electronic database, including planned limits, such that it could be repeated See Appendix 2
Study records:		
Data management	11a	Describe the mechanism(s) that will be used to manage records and data throughout the review See page 11, line 212-220
Selection process	11b	State the process that will be used for selecting studies (such as two independent reviewers) through each phase of the review (that is, screening, eligibility and inclusion in meta-analysis) See page 10, line 190-199
Data collection process	11c	Describe planned method of extracting data from reports (such as piloting forms, done independently, in duplicate), any processes for obtaining and confirming data from investigators See page 10, line 200-208
Data items	12	List and define all variables for which data will be sought (such as PICO items, funding sources), any pre-planned data assumptions and simplifications See page 11, line 208-211
Outcomes and prioritization	13	List and define all outcomes for which data will be sought, including prioritization of main and additional outcomes, with rationale See page 8, line 149-161
Risk of bias in individual studies	14	Describe anticipated methods for assessing risk of bias of individual studies, including whether this will be done at the outcome or study level, or both; state how this information will be used in data synthesis See page 11, line 221-243

Data synthesis	15a	Describe criteria under which study data will be quantitatively synthesised See page 15, 320-325
	15b	If data are appropriate for quantitative synthesis, describe planned summary measures, methods of handling data and methods of combining data from studies, including any planned exploration of consistency (such as I^2 , Kendall's τ) See page 12, line 244-305
	15c	Describe any proposed additional analyses (such as sensitivity or subgroup analyses, meta-regression) See page 15, line 326-351
	15d	If quantitative synthesis is not appropriate, describe the type of summary planned See page 15, 322-323
Meta-bias(es)	16	Specify any planned assessment of meta-bias(es) (such as publication bias across studies, selective reporting within studies) See page 15, line 306-319
Confidence in cumulative evidence	17	Describe how the strength of the body of evidence will be assessed (such as GRADE) See page 17, line 353-355

*** It is strongly recommended that this checklist be read in conjunction with the PRISMA-P Explanation and Elaboration (cite when available) for important clarification on the items. Amendments to a review protocol should be tracked and dated.
