

CPAx eLearning module pilot

Dear colleague,

The Chelsea Critical Care Physical Assessment tool (CPAx) was designed to aid in the assessment of patients with intensive care unit acquired weakness (ICU-AW). Following initial validation work, this eLearning module was put together to enable us to distribute the CPAx for wide spread use in a standardised manner. Before this can be done the eLearning module needs to be piloted so that any necessary modifications can be made to ensure that the module is achieving its aims.

This questionnaire is designed for you to be able to feed back to the eLearning module developers about the module content, navigation and design to allow us to develop it further. The questionnaire is not designed to investigate your views of the CPAx tool itself.

Thank you for taking the time to complete both the CPAx eLearning module as a pilot centre and this feedback questionnaire. Your thoughts are invaluable to this project.

Yours sincerely,

The CPAx development team.
