

Appendix 2: Data extraction instrument

A data charting form from the Joanna Briggs Institute will be adapted by removing some items considered not relevant to our review question and adding one relevant item. A set of the following information will be charted from each article included in the review:

- Author(s), year of publication, country of study.
- Objectives and aims of each study or presentation.
- The study type methodology and design.
- Study population and participants size.
- Access barriers and indicators.
- Key findings that relate to the scoping review question

The charting form will be continually updated as familiarity with the studies, and the charting form grew to ensure the extraction of all relevant results.
