

Supplementary File 2. Vital sign progression.

Supplementary File 2. Vital sign progression, <i>n</i> (%) <i>N</i> = 25,039	Heart rate	Glasgow Coma Score	Respiratory rate	SpO ₂ ± oxygen*
First and last values are both within the normal age-specific range	11,554 (46.1%)	14,388 (57.5%)	9,407 (37.6%)	14,186 (56.7%)
First and last values are both outside the normal age-specific range	3,874 (15.5%)	1,581 (6.3%)	1,200 (4.8%)	760 (3.0%)
First value is outside and last value is within the normal age-specific range	2,365 (9.4%)	1,033 (4.1%)	966 (3.9%)	2,052 (8.2%)
First value is within and last value is outside the normal age-specific range	993 (4.0%)	174 (0.7%)	260 (1.0%)	1,275 (5.1%)
Less than 2 observations of that particular vital sign	6,253 (25.0%)	7,863 (31.4%)	13,206 (52.7%)	6,766 (27.0%)

Vital sign progression during ambulance transport showing events with patients of all age groups.

*Change in SpO₂ from either ≥95% or below 95% regardless of oxygen treatment.
