

Topic guide Healthcare professionals

Did you encounter any difficulty recruiting participants/patients into the study?

Were patients willing to participate?

If not, what were their reasons, if given?

Did you follow the SOP for the screening i.e. handheld electronic device, blood pressure monitor and smoking risk detection?

If not, why? What procedure did you follow?

Did you use an alternative procedure?

If so, why? Was it better?

Do you feel that the screening process benefitted your patients?

If so/not, why?

Would you be happy to see this screening introduced in primary care?

If so/not, why?
