## TRUFFLE 2

## Imperial College London

## Doppler Image Scoring

## For Umbilical Artery:

| PULSEWAVE IMAGE (/6) | 1 point | 0 point |
| :--- | :--- | :--- |
| Magnification | Doppler display occupies 50\% or <br> more of the image | Doppler display occupies <50\% of <br> the image |
| Angle of insonation | $<30$ degrees | 30 degrees or more |
| Sweep speed | Doppler spectrum has 4-10 <br> waveforms | Doppler spectrum has < 4 (3 or <br> less) or > 10 waveforms (11 or <br> more) |
| Sample gate | Large enough to include 3/4th of <br> the vessel diameter | Smaller than 3/4th of the vessel <br> diameter |
| Appropriate PRF | The waveform fits at least 75\% of <br> the pulse wave Doppler scale or <br> PRF (pulse repetition frequency) | The waveform fits < 75\% of the <br> pulse wave Doppler scale or PRF |
| Image quality | Uniform arterial waveforms, no <br> aliasing or background artefacts <br> or fetal breathing movements | Variable arterial waveforms/ <br> aliasing/background <br> artefacts/fetal breathing <br> movements |

## For Middle Cerebral Arterial: (as above)

| PULSEWAVE IMAGE (/6) | 1 point | 0 point |
| :--- | :--- | :--- |
| Magnification | Doppler display occupies 50\% or <br> more of the image | Doppler display occupies <50\% of <br> the image |
| Angle of insonation | $<30$ degrees | 30 degrees or more |
| Sweep speed | Doppler spectrum has 4-10 <br> waveforms | Doppler spectrum has < 4 (3 or <br> less) or $>10$ waveforms (11 or <br> more) |
| Sample gate | Large enough to include 3/4th of <br> the vessel diameter | Smaller than 3/4th of the vessel <br> diameter |
| Appropriate PRF | The waveform fits at least 75\% of <br> the pulse wave Doppler scale or <br> PRF | The waveform fits < 75\% the <br> pulse wave Doppler scale or PRF |
| Image quality | Uniform arterial waveforms, no <br> aliasing or background artefacts <br> or fetal breathing movements | Variable arterial waveforms/ <br> aliasing/background <br> artefacts/fetal breathing <br> movements |
