Format C:

The Hospital Anxiety and Depression Scale (HADS) scores at 90-180 days after admission

Format D:

Proportion of patients reporting Hospital Anxiety and Depression Scale - Depression (HADS-D) Scores

The Hospital Anxiety Depression Scale (HADS) is a 14-item questionnaire, containing two 7-item subscales: anxiety (7 items in total) and depressive symptoms (HADS-D: 7 items in total). Each item is rated from 0 (best) to 3 (worse). The total score is calculated by adding the scores of all items. The suggested cut-off score for HADS-D is 11/12 or greater.
