

The nonlinear association between age and socioeconomic status on reported opioid use: cohort study using health survey for England waves from 1997 to 2014

Supplementary Materials: Sensitivity Analysis

Table SM1: Semi-parametric generalised additive models for the odds of reported prescription opioid use with smooth function for the effect of age, varying by SES measure in Females only

	Opioid use (Model including income)	Opioid use (Model including employment status)	Opioid use (Model including education)
Parametric coefficients	OR (95% CI)	OR (95% CI)	OR (95% CI)
Intercept	0.01 (0.01:0.01) ***	0.004 (0.003:0.006) ***	0.012 (0.009:0.015) ***
White (ref: Not white)	2.11 (1.66:2.67) ***	1.91 (1.51:2.43) ***	1.90 (1.50:2.41) ***
Urban (ref: Rural)	1.30 (1.14:1.48) ***	1.23 (1.08:1.40) **	1.31 (1.14:1.49) ***
Income Quantile (ref: 1-Lowest)			
Income 2	0.98 (0.81:1.19)		
Income 3	0.71 (0.57:0.87) ***		
Income 4	0.47 (0.38:0.59) ***		
Income 5 - Highest	0.41 (0.32:0.52) ***		
Income Missing	0.75 (0.60:0.93) **		
Economic Status (ref: Employed)			
Domestic		1.59 (1.29:1.97) ***	
Ill or disabled		17.52 *** (12.97:23.66)
