

Supplemental Table 2: Multivariate logistic regression modeling Self-Reported Health using Approach 1, main effects models, with four individual variables

<b>Variables</b>	<b>aOR</b>	<b>95% CI</b>	<b>p</b>
<i>Focal intersectional variables</i>			
<b>Race/ethnicity</b>			
White, non-Hispanic	Ref.		
BIPOC, any race or ethnicity	0.65	0.61, 0.69	<0.0001
<b>Federal poverty level</b>			
Above	Ref.		
Below	0.55	0.51, 0.59	<0.0001
<b>Disability status</b>			
No disability	Ref.		
Either mental or physical	0.13	0.12, 0.14	<0.0001
<b>Sexual orientation</b>			
Heterosexual	Ref.		
Gay/lesbian/bisexual/don't know	0.95	0.82, 1.10	0.47

Note: Model included survey weights and strata using complex survey design procedures in SAS; adjusted for age group and gender
