

Supplementary table 1. A comparison of response rates, and reported demographic and background variables according to pregnancy outcome (viable pregnancy, early pregnancy loss (then subdivided into miscarriage and ectopic))

	Viable pregnancy	All EPL	Miscarriage	Ectopic
Number recruited	58	128	104	24
Active withdrawal	2	9	9	0
Invalid email	6	5	5	0
Response rate	20/50 (40%)	69/114 (61%)	53/90 (59%)	16/24 (67%)
Self-reported background characteristics:				
Length of time trying to conceive <3 months	9/20 (45%)	41/69 (59%)	32/53 (60%)	9/16 (65%)
IVF pregnancy	2/20 (10%)	5/69 (7%)	3/53 (6%)	0/16 (0%)
Existing children	5/20 (25%)	26/69 (38%)	22/53 (42%)	4/16 (25%)
Previous miscarriage	9/20 (45%)	27/69 (39%)	22/53 (42%)	5/16 (31%)
Previous ectopic	0/20	6/69 (9%)	2/53 (4%)	4/16 (25%)
Current psychiatric diagnosis	0/20	2/69 (3%)	1/53 (2%)	1/16 (6%)
Past psychiatric diagnosis	8/20 (40%)	17/69 (25%)	13/53 (25%)	3/16 (19%)
Pregnancy desired – proportion ‘very much so’	7/20 (35%)	61/69 (88%)	49/53 (92%)	12/16 (75%)
3-month response rates:				
Drop-out rate from 1 to 3 months	n/a	25/69 (36%)	20/53 (38%)	5/16 (31%)
Proportion of respondents pregnant at 3 month follow-up	n/a	6/44 (14%)	4/33 (12%)	2/11 (18%)

EPL - early pregnancy loss; IVF – In vitro fertilization
