Supplementary Figure 1. Unadjusted and adjusted odds ratios (OR) and hazard ratios (HR) for NAFLD. A and B showed the OR and HR of LDL-c in the cross-sectional population and longitudinal population, respectively. Model 1 is a univariate analysis. Model 2 is adjusted for sex, age. Model 3 is adjusted for sex, age, body mass index, fasting plasma glucose, albumin, alanine aminotransferase, aspartate aminotransferase, blood urea nitrogen, creatinine, total cholesterol, triglyceride, high-density lipoprotein cholesterol, systolic blood pressure, diastolic blood pressure and uric acid. Q1: ≤ 1.92 mmol/L, Q2: 1.93-2.27 mmol/L, Q3: 2.28-2.61 mmol/L and Q4: 2.62-3.12 mmol/L.
