**Inclusion criteria**

**Study design**
- Published in peer reviewed journal
- Qualitative data collection (mixed methods OK if qualitative component reported separately)
- Qualitative data analysis (mixed methods OK if qualitative component reported separately)

**Population**
- Primary care clinician (general medical practitioners, physiotherapists, occupational therapists, exercise physiologists, podiatrists, pharmacists, practice nurses, dieticians and nutritionists) (mixed primary and tertiary practitioners OK if data from primary care practitioners reported separately)

**Setting**
- Primary care management

**Condition**
- Osteoarthritis (arthritis - including both OA and RA - OK if data specific to OA recommendations are reported separately in the paper)

**Data**
- Report primary data (not reviews)
- Report barriers, enablers (facilitators) or beliefs/perceptions of guidelines recommendations or EBP for OA

**Exclusion criteria**
- Only quantitative data analysis
- Primary care practitioners views on practice guidelines in general or a non-specific practice guideline
- Not written in English
- Grey literature (editorials, expert opinion, letters or commentary)

To be included papers must be rated as **yes** for all inclusion criteria and have **no** for exclusion criteria:

Include or exclude?
