

Appendix 1. Evaluation form for cardiopulmonary resuscitation simulation performance

Items		Scores				
		Very unsatisfied	Unsatisfied	Average	Satisfied	Very satisfied
		1	2	3	4	5
Leadership	1. Ability to designate roles to team members					
	2. Ability to give orders to team members					
	3. Ability to aid team members in their various roles					
	4. Ability to perceive the situation and understand what actions must be taken					
Teamwork	5. Ability to effectively communicate with and deliver clear, concise messages to teammates					
	6. Ability to cohesively work with teammates to achieve a common goal using patience, understanding, and respect					
	7. Ability to share the simulation experience with fellow teammates					
	8. Ability to act efficiently and in an organized manner					
	9. Ability to follow ACLS guidelines and protocols					
	10. Ability to successfully complete the simulation					
Team member	11. Ability to make initial contact with the patient to determine consciousness and state of mind					
	12. Ability to check patient airways for obstructions					
	13. Ability to consistently deliver oxygen to the patient using a Bag Valve Mask					
	14. Ability to perform effective chest compressions on patient					
	15. Ability to set up and use a defibrillator					
	16. Ability to efficiently and successfully intubate the patient					
	17. Ability to inject appropriate medication through the patient's IV					
	18. Ability to monitor patient vital signs					
	19. Ability to monitor and understand patient EKG					

	outputs					
	20. Ability to accurately record events of the simulation, including times for each of the protocol steps, and procedures/medications used					
Global rating scales						

ACLS, Advanced Cardio-pulmonary Life Support; EKG, Electrocardiography; IV, Intravenous catheter.
