

1 Supplemental data

2 Search terms

3 Search strings for the two research databases differed because of the differences in the
4 indexing methods used by each database. PubMed indexes the following under the heading of
5 telemedicine: telerehabilitation, teleradiology, telepathology, and remote consultation. CINAHL
6 does not automatically index these terms together so they were searched for by name. The initial
7 search in PubMed was (telemedicine OR telehealth) AND "Patient Satisfaction."
