Over the years, the library activity has been focused on libraries programs. But today, according to the scientific development of information technology in various fields including medicine Librarians and Medical Informatics sciences skills in new areas serving the medical community and patients has changed. In addition to changing activities, medical librarians working in the libraries of traditional state-centered research activities, new jobs have been created for graduates. In this study, a qualitative interview from librarians graduated between the years 80 to 93 and working in different parts of Tabriz University of Medical Sciences was created. According to the qualitative interviews, medical librarians have a strong presence in these activities:

As well as doctors and care team members in different centers, such as research centers, training and knowledge management university, helping in the search for papers for scientific
