

Greenness and Job-related Chronic Stress in Young Adults: A
Prospective Cohort Study in Germany

Supplementary material

Table S1. Median, Inter quartile range (IQR) and total of missing data for average of NVDI at 500 m buffer by each city and follow-up.

City	Follow-up	Median	IQR	Missing
Munich	SOLAR I	0.31	(0.26-0.34)	10
	SOLAR II	0.31	(0.26-0.34)	20
Dresden	SOLAR I	0.36	(0.31-0.41)	28
	SOLAR II	0.34	(0.30-0.40)	59
Total	SOLAR I	0.33	(0.29-0.37)	75
	SOLAR II	0.32	(0.27-0.37)	126

NVDI distributions at each follow-up

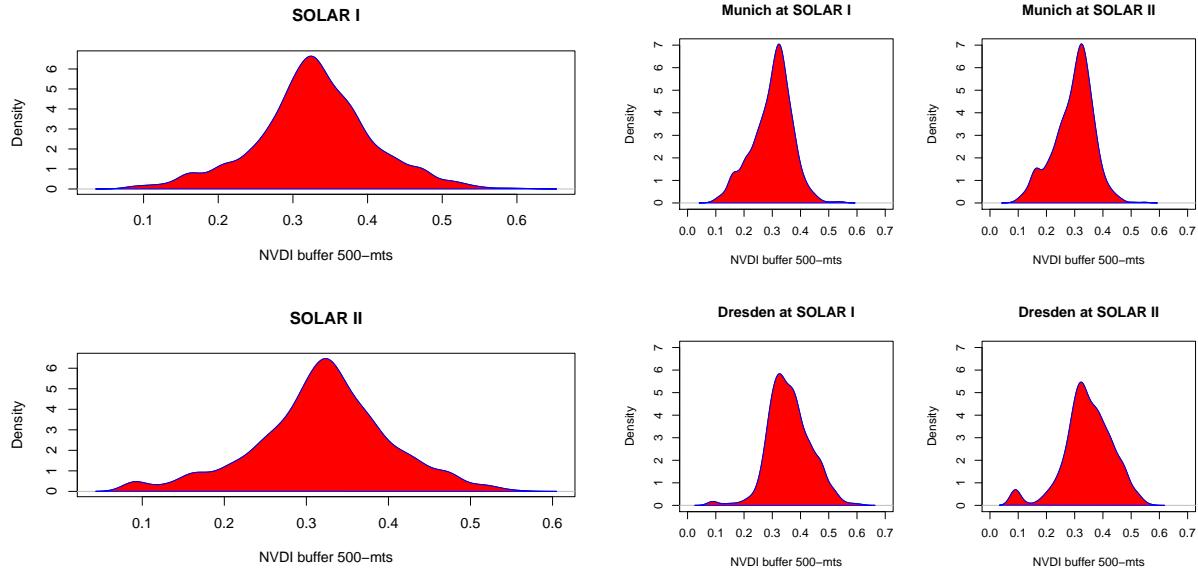

Figure S1. Distribution of NVDI in a 500 m buffer by city and follow-up

Table S2. Comparison between analyses of the unadjusted and adjusted association between residential greenness in a 500 m buffer around SOLAR participants home and job-related chronic stress.

Variable	Unadjusted				Adjusted							
	Work discontent	OR	(CI95%)	Work overload	OR	(CI95%)	Work discontent	OR	(CI95%)	Work overload	OR	(CI95%)

Multiple imputation results

Table S3. Comparison between analyses of the imputed data and the complete cases analyses of the adjusted association between residential greenness in a 500 m buffer around SOLAR participants home and job-related chronic stress. Complete cases in combined population (n=1430), Munich (n=779) and Dresden (n=651). Complete cases for non-movers in combined population (n=629), Munich (n=443) and Dresden (186)
