Learning difficulties definition

For this survey, learning difficulties means a problem of understanding or an emotional difficulty that affects a person's ability to learn, get along with others and follow convention. On a day-to-day basis, this may be many things – struggling with reading, writing or numeracy, not being able to concentrate for long periods, losing track of time, forgetting what has just been learned or acting impulsively.

If diagnosed, a learning difficulty may be associated with many conditions such as dyslexia, autism spectrum disorder (ASD) etc.

Survey closes: 31 July 2017

Consent

It is your choice whether you fill in this survey or not. The questions and comments that you write below may be published online and in printed documents but we will never publish your name.

Section A - Your Questions

What questions would you like answered by research?

Think about your own personal and/or professional experience with learning difficulties. Your questions might be related to:

- causes
- identifying or diagnosing learning difficulties
- the effect on everyday life (e.g. in education, work, relationships, health and wellbeing)
- what helps (e.g. interventions, therapies, treatments, care and support) or anything you'd like to know the answer to.

No question is too big or too small. You can suggest up to three questions. They do not have to be in order of importance.

Please write your questions in the boxes below.

Question 1

Question 2 (please leave blank if you don't have any more questions)

Question 3 (please leave blank if you don't have any more questions)
