

Supplemental file 1

Supplemental Table 1. Odds ratios for meeting the ‘illness burden’ criteria for angina, cataract, depression, diabetes and osteoarthritis, medical diagnosis for those estimated to have a condition, and treatment for those with a diagnosis, comparing the least wealthy with the most wealthy: binomial regression

Adjusted odds ratios* (95% CI)				
Condition	Illness burden (Wave 3)	Medical diagnosis (Wave 4)	Treatment (Wave 5)	N in treatment†
Angina	8.7 (5.5, 13.8)	1.4 (0.5, 4.0)	1.6 (0.3, 9.0)	11
Cataract	8.2 (5.1, 13.1)	1.0 (0.3, 3.1)	2.2 (1.2, 3.8)	83
Osteoarthritis	12.7 (9.1, 17.8)	0.7 (0.3, 1.6)	0.7 (0.3, 1.6)	30
	Illness burden (Wave 2)	Medical diagnosis (Wave 3)	Treatment (Wave 4)	N in treatment†
Depression	5.1 (4.3, 6.2)	0.4 (0.1, 1.4)	17.3 (0.5, 604)	12
Diabetes	4.4 (2.5, 8.0)	0.1 (0.0, 3.6)	0.5 (0.2, 1.1)	99

*adjusted for age group and sex

†followed through the waves

Waves used in analysis were the most recent with available data

Odds ratios where the 95% confidence intervals do not include 1 (before rounding to one decimal place) are shown in bold
