## Appendix 3. Summary of findings table

Certainty assessment							No of patients		Effect				
No of studies	Study design	I OI	Inconsistency	Indirectness	Imprecision	Other considerations	Transdermal GTN	Control/placebo therapy	Relative (95% Cls)	Absolute (95% Cls)	Certainty	Importance	
In-hospi	n-hospital mortality (follow up: range 1 day to 3 months) [Primary Outcome]												
Mean arterial pressure (follow up: range 1 day to 10 days) [Primary Outcome]													
							_						
Modified Rankin Scale (follow up: range 3 months to 12 months) [Primary Outcome]													
Development of intracerebral haemorrhage (follow up: range 1 day to 10 days) [Secondary Outcome]													
Deterior	Deterioration of NIHSS scores by at least 4 points during hospitalization (follow up: range 1 day to 10 days) [Secondary Outcome]												

Deterioration of NIHSS scores by at least 4 points during hospitalization (follow up: range 1 day to 10 days) [Secondary Outcome]

Length of hospital stay (follow up: range 1 day to 3 months) [Secondary Outcome]

Number of hypotensive episodes requiring intervention\* (follow up: range 1 day to 10 days) [Safety Outcome]

GTN: Glyceryl trinitrate; Cls: Confidence intervals; NIHSS: National Institutes of Health Stroke Scale

\*Interventions include discontinuing transdermal GTN, administration of intravenous fluids and/or inotropic drugs
